EDUCATION

B.Tech (Computer Science & Engineering)	2023-2027	Netaji Subhas University of Technology	8.05
CBSE (Class XII)	2023	School of Excellence, Rohini Sector 17	93.6%
CBSE (Class X)	2021	School of Excellence, Rohini Sector 17	88.0%

INTERNSHIP/S

Software Engineering Intern (Backend / AI), Lumee AI Enterprises, Mumbai **May 2026 - July 2026**

- **Led the AI and backend intern team** building the routing and orchestration core of a real-time voice-and-image AI tutoring backend (Python, FastAPI, PostgreSQL) serving an embedded device and a web app from one engine.
- Cut per-query time-to-first-audio from ∼**3 s to under 1 s** by loading data in parallel and streaming audio as it generated, rather than sequentially.
- **Eliminated under-load server crashes** by bounding concurrent rendering and closing memory leaks.
- Reduced model-serving cost via **tiered routing** (cheap-first, evidence-based escalation), zero-LLM shortcuts, and a solve-once cache; designed so ∼**80%** of queries resolve on the cheapest tier.
- Integrated **5+ external AI services** (Gemini, Claude, STT, TTS) behind one provider-agnostic layer.

ACADEMIC PROJECTS

- **SynKitab: Cross-Platform Document Reader & Sync Application** | synkitab.com **July 2026 - Present**
  - Built a **FastAPI + PostgreSQL/Supabase backend** for a cross-platform reader supporting **3 document formats (PDF/EPUB/CBZ)**, cloud storage, reading progress, highlights, and sharing.
  - Implemented **multi-device PDF/EPUB sync** and collaborative **book clubs**, with per-device reading positions, shared passages, chapter-based discussions, and spoiler-aware progress.
  - Built a **PDF Edit Arena** supporting cloud-based PDF operations; reduced PDF write time from **12.4 s to 5.6 s** with **42.6 s end-to-end** processing on a 119-page benchmark, while keeping the app ∼**50 MB** and memory-efficient.
  Python, FastAPI, PostgreSQL, Supabase, REST APIs, Flutter
- **Traffic Inspector: Real-Time Traffic-Violation Detection** | Flipkart Hackathon **June 2026**
  - Built the **CV camera node**: ONNX YOLO detectors, tracking and rules for **7 violation types** with time-based confirmation, run per camera on RTSP, webcam or video feeds.
  - Streamed confirmed events and evidence (annotated frames, crops, frame hash) to **Supabase**, **spooling to disk during outages**, with a live-video **WebSocket** preview.
  Python, YOLO, ONNX, PaddleOCR, Supabase, WebSockets
- **Aqi-Forecasting: AQI Forecasting MLOps Service** | GitHub **April 2026 - May 2026**
  - Built **PySpark + ZenML** training and retraining pipelines for a **48-hour** → **6-hour** AQI forecaster, retraining from inference events stored in **PostgreSQL**.
  - Served predictions via a **Dockerized FastAPI** service with ESP32 payload cleaning, a model registry, and tests.
  Python, PySpark, ZenML, FastAPI, Docker, PostgreSQL, TensorFlow

ACADEMIC ACHIEVEMENTS AND AWARDS

- **JEE Advanced, AIR 9,774:** ranked in the **top 1%** of candidates in India's most competitive engineering entrance exam.
- **Finalist, NXP Autonomous Warehouse Challenge:** placed **top 14 nationally** among 5,800+ teams with an edge-AI navigation bot.
- **Runner-up, FES NSUT AI FinTech Hackathon:** built an NLP-to-SQL inventory tool that **cut dead-stock identification time by 60%**.

POSITIONS OF RESPONSIBILITY

- **Director, ARES Robotics Society of NSUT** **2023 - Present**
  - Rose from member to Executive Committee to **Director (2026)**; led technical ops and the **Moksha 2024** showcase.
  - Headed **Innovision 2025**, NSUT's annual technical fest, with **100+ registrations**, owning planning and execution end to end.

EXTRA-CURRICULAR ACTIVITIES AND ACHIEVEMENTS

- **Volunteer, National Service Scheme (NSS), NSUT:** ran **7+ workshops (∼80 students each)** mentoring Class 10-12 government-school students on careers in engineering.

TECHNICAL SKILLS

- **Languages:** Python, C++, Dart
- **Core CS:** Data Structures & Algorithms, OOP, System Design
- **ML / AI & MLOps:** TensorFlow, Scikit-learn, XGBoost, OpenCV, PyTorch, YOLO, ONNX, PySpark, ZenML
- **Backend & APIs:** FastAPI, REST APIs, WebSockets, PostgreSQL, Supabase, Redis, MQTT
- **Tools:** Git, Docker, Linux, VS Code, Kaggle, Arduino IDE **Deployment:** Render, Raspberry Pi
